2. Dimensions and Construction of Drums

- Ensure the drum dimensions are appropriate for the conductor size (55 sq.mm).
- The drum barrel must have a smooth surface, and no nails or sharp edges should project into the conductor layer.

3. Minimum clearance :

A minimum clearance of 50 mm is generally considered sufficient for medium-sized conductors like 55 sq.mm AAA ensuring the conductor layers do not come into contact with the drum flanges. Confirm that the drum flanges are sturdy enough to prevent inward bending under pressure, which could reduce clearance.

11.2 The drums shall be of such construction as to ensure delivery of conductor in the field free from displacement and damage and shall withstand all stresses of handling and stringing operation, so that the conductor surface is not cut, dented, scratched or damaged in any way during manufacture, Transport & Stringing. - i) Breaking Load Test.
- ii) Elongation test.
- iii) Resistance.

12.1. The rejection and retest procedure shall be followed as stipulated in IS:398/Part-IV of 1994, or any other latest amendments thereof.

The type tests as specified in the IS should be carried out not later than 5 years from the date of opening of bid.

13. INSPECTION:

All tests and inspections shall be made at the place of manufacturer unless otherwise specifically agreed upon by the purchaser. The manufacturers shall afford the Inspector representing the purchaser all reasonable facilities, without charge, to satisfy him that the material is being furnished in accordance with this specification.

The Supplier /manufacturer of conductor should arrange for the inspection by the representative of the purchaser specially authorized for this purpose. Atleast 10% of the total number of drums of conductors taken at random should be checked to ascertain the length of conductor adopting the following method.

Transfer the AAAC from one reel to the other while at the same time measuring the AAAC so transferred by means of a meter. Arrangements should be made available in the works of the manufacturer for transferring the conductor from one reel to another at the same time measuring the length of conductor so transferred by means of a meter.

✓ **Both ends of the AAA Conductor will be sealed by the supplier and seals will be contained in the drum and not exposed out of drum.**

✓ **The weight of AAA Conductor will also be checked for ensuring correct lay and length of the AAA Conductor.**

- ✓ For the verification of the length of the conductor, 10 % of total lot (in Drums) should be selected at the works. The physical verification of the length of the conductor should be carried out for maximum up to 5 (five) drums. If there are anymore drums left for verification, then weight of each verified drum should be carried out and average weight may be calculated.
- ✓ Then the weight of each of all the remaining selected drums may be taken and if these weights are matching with the average weight, then that particular lot may be accepted otherwise rejected.
